HTML - Formatting

If you use a word processor, you must be familiar with the ability to make text bold, italicized, or underlined; these are just three of the ten options available to indicate how text can appear in HTML and XHTML.

Live Demo

Live Demo

Bold Text

Anything that appears within ... element, is displayed in bold as shown below -

Example

```
<!DOCTYPE html>
<html>
   <head>
      <title>Bold Text Example</title>
   </head>
   <body>
      The following word uses a <b>bold</b> typeface.
   </body>
</html>
```

This will produce the following result -

The following word uses a **bold** typeface.

Italic Text

Anything that appears within <i>...</i> element is displayed in italicized as shown below -

The following word uses an <i>italicized</i> typeface.

Example

<html>

</head>

<body>

</body>

```
<!DOCTYPE html>
```

</html>

This will produce the following result -

The following word uses an italicized typeface.

<title>Italic Text Example</title>

Underlined Text

Anything that appears within <u>...</u> element, is displayed with underline as shown below -

Example

This will produce the following result -

The following word uses an <u>underlined</u> typeface.

Strike Text

Anything that appears within **<strike>...</strike>** element is displayed with strikethrough, which is a thin line through the text as shown below –

Example

Live Demo

```
<!DOCTYPE html>
<html>

<head>
    <title>Strike Text Example</title>
</head>

<body>
    The following word uses a <strike>strikethrough</strike> typeface.
</body>
</html>
```

This will produce the following result -

The following word uses a strikethrough typeface.

Monospaced Font

The content of a <tt>...</tt> element is written in monospaced font. Most of the fonts are known as variable-width fonts because different letters are of different widths (for example, the letter 'm' is wider than the letter 'i'). In a monospaced font, however, each letter has the same width.

```
Example
```

The following word uses a monospaced typeface.

Superscript Text

The content of a **^{...}** element is written in superscript; the font size used is the same size as the characters surrounding it but is displayed half a character's height above the other characters.

Example

Live Demo

Live Demo

This will produce the following result -

The following word uses a superscript typeface.

Subscript Text

The content of a **_{...}** element is written in subscript; the font size used is the same as the characters surrounding it, but is displayed half a character's height beneath the other characters.

Example

Live Demo

```
</head>
  <body>
      The following word uses a <sub>subscript</sub> typeface.
</body>
</html>
```

```
The following word uses a subscript typeface.
```

Inserted Text

Anything that appears within <ins>...</ins> element is displayed as inserted text.

Example

This will produce the following result -

```
I want to drink <del>cola</del> wine
```

Deleted Text

Anything that appears within **...** element, is displayed as deleted text.

Example

Live Demo

Live Demo

```
I want to drink eola wine
```

Larger Text

The content of the **<big>...</big>** element is displayed one font size larger than the rest of the text surrounding it as shown below –

Example

This will produce the following result -

```
The following word uses a big typeface.
```

Smaller Text

The content of the **<small>...</small>** element is displayed one font size smaller than the rest of the text surrounding it as shown below –

Example

Live Demo

Live Demo

```
</body>
```

```
The following word uses a small typeface.
```

Grouping Content

The **<div>** and **** elements allow you to group together several elements to create sections or subsections of a page.

For example, you might want to put all of the footnotes on a page within a <div> element to indicate that all of the elements within that <div> element relate to the footnotes. You might then attach a style to this <div> element so that they appear using a special set of style rules.

Example

Live Demo

```
<!DOCTYPE html>
<html>
   <head>
      <title>Div Tag Example</title>
   </head>
   <body>
      <div id = "menu" align = "middle" >
         <a href = "/index.htm">HOME</a> |
         <a href = "/about/contact_us.htm">CONTACT</a> |
         <a href = "/about/index.htm">ABOUT</a>
      </div>
      <div id = "content" align = "left" >
         <h5>Content Articles</h5>
         Actual content goes here....
      </div>
   </body>
</html>
```

This will produce the following result -

	HOME CONTACT ABOUT
Content Articles	
Actual content goes here	

The element, on the other hand, can be used to group inline elements only. So, if you have a part of a sentence or paragraph which you want to group together, you could use the element as follows.

Example

Live Demo

This will produce the following result -

This is the example of span tag and the div tag alongwith CSS

These tags are commonly used with CSS to allow you to attach a style to a section of a page.
